

$$\text{proj}_{\vec{q}}(\vec{p}) = \frac{\vec{p} \cdot \vec{q}}{|\vec{q}|^2} \cdot \vec{q}$$

$$\text{Distance} = |\vec{BA} - \text{proj}_{\vec{BC}}(\vec{BA})|$$

$$\vec{p} = \vec{AB} = \vec{B} - \vec{A} = (1, 1) \quad |\vec{p}| = \sqrt{2}$$

$$\vec{q} = \vec{BC} = \vec{C} - \vec{B} = (2, -5) \quad |\vec{q}| = \sqrt{29}$$

Projection of  $\vec{p}$  onto  $\vec{q}$

$$\frac{\vec{p} \cdot \vec{q}}{|\vec{q}|^2} \cdot \vec{q} = \frac{(2-5)}{\sqrt{29}^2} \cdot (2, -5) = \frac{-3}{29} \cdot (2, -5) = \left( \frac{-6}{29}, \frac{15}{29} \right)$$

$$\text{proj}_{\vec{q}}(\vec{p}) = \left( \frac{-6}{29}, \frac{15}{29} \right)$$

Distance of A to  $\vec{q}(\vec{BC})$

$$\vec{BA} = \vec{A} - \vec{B} = -\vec{p} = (-1, -1)$$

$$\vec{BA} - \text{proj}_{\vec{q}}(\vec{BA}) = \vec{BA} - \text{proj}_{\vec{q}}(-\vec{p}) = \vec{BA} - \left( \frac{+6}{29}, \frac{-15}{29} \right) = (-1, -1) - \left( \frac{+6}{29}, \frac{-15}{29} \right)$$

$$= \left( \frac{-35}{29}, \frac{-14}{29} \right)$$

$$\text{Distance} = \sqrt{\left( \frac{-35}{29} \right)^2 + \left( \frac{-14}{29} \right)^2} = \sqrt{\frac{1421}{(29)^2}} = \frac{7\sqrt{29}}{29}$$

Area Distance  $\times |\vec{BC}| \times \frac{1}{2}$

$$\frac{7\sqrt{29}}{29} \times \sqrt{29} \times \frac{1}{2} = \frac{7}{2} = \boxed{3.5}$$
